## **EUROPEAN DESIGN COMPETITION "LIGHTS OF THE FUTURE"**

Name of Luminaire	"mobilor"
Design Category	Floor lamp or ceiling light
Dimensions of Luminaire	length: 1070mm
	depth x width : 30mm x 30mm
Type of Lamp, Wattage	16mm- diameter linear fluorescent lamp (T5), 14W
Class of Ballast Used	Celma classification scheme : A
Main Production Materials	Aluminium, metal
	color options: raw aluminium or black
Intended Target Market	Middle/ high, design conscious buyers
Estimated Production Cost in Euro	estimated cost of luminaire without the lamp-ballast combination : 50 Euro
<b>Estimated Retail Price Class</b> in Euro, excluding pin-based bulb and value added tax	above 150 Euro

## **Product Description:**

The main idea of my piece of work is to form an integrated whole of all necessary elements of the lamp by reducing it to a simple geometrical figure that relates to the form of the tube.

To guarantee high flexibility MOBILOR offers the possibility to shift the light in all horizontal positions. It can be a ceiling light, a floor lamp or a table lamp at the office. Thus MOBILOR is not only a lamp but a sophisticated design of lighting.

I used the "mobile - system", where all elements are in balance all the time. The corpus of the lamp is held on the top of the stand. If desired this can be rotated by hand. It is devided into tree different segments and each is able to move seperately. The longest segment is the fluorescent tube with reflector. The part in the middle contains the electronical components and a weight for balance. The smallest segment is the counterweight which generates the balance in the center of gravity.
